

ShadowSense Modular quickly becoming Industry Standard

Since becoming generally available last year, our Modular touch solution, based on the patented ShadowSense™ technology, has been deployed in numerous office and retail locations. We are proud to announce nearly **100 systems** have been sold and installed worldwide.

The Modular is a touch frame overlay specifically designed for video walls. We are HID compliant and self-configuring with no drivers, making assembly a breeze.

We support both portrait and landscape mode, and can fit all sizes of video wall configurations from 2 x 1 to as large as 5 x 3.

Top brands such as **Cisco, IKEA, and Tommy Hilfiger** have installed video walls powered by Baanto's Modular system in order to create truly magical showcases in their stores and lobbies. Easy assembly, native OS support, and light immunity are some of the key benefits of the Modular system.

The installation of video walls powered by ShadowSense Modular is supported by **global integration partners** including NEC, TSI Touch, Optika, PresTop and UTouch.

Modular Installations

Cisco

Working with NEC displays and Saville Audio Visual, we created **one of our biggest video walls** for CityVerve. The installation was completed in less than a week.

The system was unveiled at the official opening of Bright Building at Manchester Science park. Users experience intuitive touch control for landmarks and locations on a dazzling 3 by 5 video wall display. [Read more.](#)

IKEA

In locations across the UK and Ireland, BeaverGroup entrusted Baanto's Modular to make a multi-touch video wall that functions in a bright light environment.

The installation gives guests the opportunity to create a mood board for their own personal home projects. Pictures, interactive dials, and colour options work seamlessly with **ShadowSense multitouch** functionality for an intuitive and memorable experience.

Tommy Hilfiger

Tommy Hilfiger deployed Baanto's Modular video wall across multiple European sites including the **company's flagship store in London**.

2 x 3 and 3 x 3 display configurations were employed to deliver Tommy's unique eye-catching content interactively and with sizzle.
